

PALLET STOPS

Pallet Stops are full bay-width 'square-tube' bars that utilize offset beam brackets to position the 'stop' bar a precise distance from the rear face of the pallet rack bay. The several uses of the Pallet Stop include a pallet positioning tool for 'deep-reach' pallet put-away, or any precision pallet depositing related to load balance and point load support. As a safety tool, pallet stops provide protection to walls that are adjacent to single deep rows of rack and (foremost) they aide in

protecting against product falling from the rear side of a rack bay. Another key use of pallet stops is to assist in maintaining the code-compliant 'longitudinal flu space' between back-to-back rows of pallet rack.

FEATURES/BENEFITS

- | Powder coated orange color for high visibility
- | Provides adequate flu space

PRODUCT INFORMATION

PALLET STOPS	DESCRIPTION
SIZES AVAILABLE:	96" & 144"
OFFSET:	3"
STOCKING COLOR:	Orange

Note: Additional Sizes and Colors Available Upon Request. Customize to Order.
